

Gardening Basics

Kori Wilken

In this **on-site** course in the garden at the former ALCS building, the students will work to help tend the garden, both inside the greenhouse and out.

In so doing, we will learn and apply dry-climate gardening principles including (and not limited to!) mulching, shading, garden design, plant spacing, soil-building, water needs, transplanting, and general care for both annual and perennial plants.

The class is designed for beginner through intermediate gardeners. Students should come prepared both for physical work and for sharing personal gardening experiences to contribute to this group effort in food production! All necessary tools and materials will be provided.

Class will meet June 8-12 from 8:45-11:00am. Depending upon student interest, the course may continue into the following week. As this is an in-person class, students will be expected to bring and wear face coverings to use when we are in close proximity to one another. Other covid-related safety precautions will also be stringently practiced. Also students grades 7-12 are welcome to enroll.
